Summary:

The School of Business had organized a visit to The Centre for Entrepreneurship Development, Naroda to intensify the knowledge of students regarding entrepreneurship.

- Students were introduced about EDC by Mr. Bhatt
- He had a conversation with students regarding their future and had explained the economy of India.
- Mr. Bhatt Introduced a very interesting and practical game named “Making of Boat”
- “Making of Boat” game was a time-based task, which gave the difference between ground level experience and theoretical estimation
- The interaction was quite interesting about the

Objective of the event:

The objective of this visit was to develop entrepreneurship mindset and to promote them so that maximum job provider could be available in the market, rather than job seekers. This would reduce the unemployment and even would boost the economy of our nation.

Significance/Outcome:

The significance of the visit was quite positive, focusing towards entrepreneurship, ground level experience and the problems one may face during any startup. The main aim of the visit was to inculcate the awareness about startup in student’s mind.

Conclusion:

The visit had an impactful effect on the mindset of the students. They came to know about the difference between predicted time and real time to complete any task. Sometime we decide the task just by having a simple mathematical calculation ignoring all other factors which results into contradiction. Thus, we must understand each and every basic situation to decide our task. We should even focus on the quality of the product or services we are providing.
